INTRODUCTION

The Montana Highway Commission is directly responsible for the construction and maintenance of approximately 5,800 miles of highways on the Primary System. It is also responsible for the construction of about 3,700 miles of roads now on the Secondary System.

In order to determine design standards and construction priorities for this large network of highways, it is necessary to obtain information on the extent that each section of highway is used. These required data are obtained and kept current by taking various types of traffic counts at approximately 1,500 locations throughout the State each year. These counts are converted to average daily traffic figures which have been used in compiling this report.

In traffic reports for previous years pickups and light panels have been classified as commercial vehicles due to the fact that they are licensed in Montana as trucks. Beginning in 1954, these units have been reclassified with the passenger cars in order to show a more realistic picture of travel by the heavier commercial vehicles.
